

Rúben Albuquerque

Data Engineer

 Rúben Albuquerque

 rubenaalbuquerque@gmail.com

 Portfolio

 Gland, Vaud, Switzerland

Skills		
✓ Python (Pandas, PySpark)	✓ Databricks (Jobs, Asset Bundles)	✓ Airflow, Argo Workflows
✓ SQL, OpenCypher	✓ Azure (Blob Storage, Data Factory)	✓ Docker, Kubernetes
✓ Git, CI/CD	✓ AWS (S3, EKS, Aurora, Neptune)	✓ Data Modeling, Data Lake

Professional Experience

Affinity

- Data Engineer (Celfocus)

2024 - Present

 - Developed and deployed scalable ETL pipelines using Python and PySpark on Databricks, processing **~60–70GB of telecom data across 30+ datasets**.
 - Built multi-task workflows and metadata-driven **data quality** checks using **Databricks Jobs (Asset Bundles)**, enabling automated auditing and data traceability.
 - Designed and implemented cloud-native, **event-driven data architectures on AWS**, improving system scalability, reliability, and performance.
 - Enhanced data platform efficiency by implementing data quality frameworks and automating workflows with Docker, Kubernetes, and CI/CD pipelines.
- Data Engineer (BNP Paribas)

 - Built and orchestrated **batch data ingestion** pipelines using Python, Amazon S3 and Apache Airflow, integrating APIs, CSV files, and database sources, processing **1TB+ of data across daily and weekly workloads**.
 - Designed complex Airflow DAGs with task dependencies, **retries, and automated error handling**, improving pipeline reliability and reducing failures in production workflows.
 - Implemented configurable **business-rule-based data quality** framework, automating previously manual validation processes and improving consistency and scalability of data processing across business units.

Jobbex Group

- Data Engineer (Touch Inflight Entertainment)

2023 - 2024

 - Developed and implemented data analysis models using **Python, SQL, and Databricks**, leading to increased efficiency in operational performance reporting within the aviation sector.
 - Collaborated on configuring and optimizing **data pipelines in Azure Data Factory**, reducing data processing time for critical onboard experience insights.

Centro de Medicina Laboratorial Germano de Sousa

- Data Analyst

2020 - 2021

 - Performed **comparative analysis** of manual and automated genetic test annotations using IBM Watson for Genomics, identifying accuracy and performance improvements through **Python and SQL analysis**.
 - Created **interactive dashboards in Power BI**, improving stakeholder understanding of AI performance and conducted statistical analyses that supported the full alignment on adopting automated annotations.

Education

Instituto Politécnico de Lisboa, ISEL 	2021 – 2024
Master's Degree in Computer Engineering and Multimedia	
Instituto Politécnico de Setubal, ESTB	2018 – 2021
Bachelor's Degree in Bioinformatics	

Courses and Certificates

Mastering Azure Databricks for Data Engineers Specialization (Packt)	2025
Intro to SQL / Advanced SQL (Kaggle)	2023
Machine Learning with TensorFlow (FreeCodeCamp) 	2023
Python fundamentals for Data Analysis (Data Science Academy)	2021

Languages

Portuguese - Native	English - B2	French - A2
